RATES OF APPLICATION – SUGARBEET

When applying the following recommendations for SPIN-AID® Herbicide to sugarbeets, add HSMOC or MSO 0.5-1% v/v.

GROUND AND AERIAL APPLICATION: This product can be applied as a ground or aerial spray to sugarbeets with multiple applications to control common lambsquarters, kochia and common ragweed. Broadcast Application rates are provided in appropriate charts in this section. The Spin-Aid rate is adjusted to allow further sugarbeet development to ensure crop safety with higher rates. For applications with ground equipment, apply in a minimum of 15 GPA water. Apply in 20 to 30 GPA water to more dense weed populations to ensure thorough coverage. For aerial applications, (helicopter or fixed wing aircraft) apply in 5 to 10 gallons of water. To completely control the targeted weeds, a second application timed to 5 to 7 days after the first application is REQUIRED. A third application timed to 5 to 7 days after the second application is recommended for maximum weed control. A maximum of three (3) applications are allowed and not to exceed a total of 3 qts/A.

USE PRECAUTIONS

DO NOT APPLY SPIN-AID® HERBICIDE TO SUGARBEETS LATER THAN 75 DAYS PRIOR TO HARVEST.

For sugarbeets:

GROUND APPLICATION: leave a 16 foot buffer from the application area when the wind direction is toward sensitive dicot plants.

AERIAL APPLICATION: must be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water known habitat for threatened or endangered species, nontarget crops) is minimal (e.g, when wind is blowing away from sensitive areas).
